1. Introduction

The cost of maintaining IT infrastructure and the growing amount of electronic waste provide serious obstacles for people, small organizations, and institutions alike in today's rapidly evolving digital environment. An innovative company called GreenTech Repurpose tackles these pressing problems by turning outdated and unused PC hardware into strong, eco-friendly, and reasonably priced IT solutions. These recycled systems, which range from media servers and educational workstations to private cloud servers and secure routers, are made on open-source platforms to satisfy a variety of technological demands without incurring the environmental costs associated with manufacturing new technology. By providing affordable, adaptable IT solutions that empower users and advance sustainability, GreenTech aims to eliminate e-waste and reduce the digital divide. Home users, educational institutions, gaming cafés, small retail establishments, independent contractors, and public information centers are just a few of the target markets served by GreenTech's goods and services. The company guarantees that every segment receives customized solutions that are both practical and economical by offering well-thought-out service packages like School Box, Smart Shop Starter, and Home Guard Pro. GreenTech's strategy is significant because it combines social impact, technology innovation, and environmental responsibility in a way that is unique in the sustainability and IT industries.

The marketing strategy outlined in this report is intended to help GreenTech Repurpose expand and succeed. A company profile and scenario analysis are the first steps in evaluating the state of the market and internal resources. The report then presents specific marketing goals that are in keeping with the mission and vision of the business. Next, a thorough marketing plan that addresses target customer segments, product positioning, and marketing strategies is put together. A budget allocation is made to guarantee effective use of resources once the implementation plan offers a realistic timetable and targets. The evaluation section concludes by outlining important performance metrics and feedback systems to track the success of campaigns and direct ongoing development.

2. Company Profile

GreenTech Repurpose startup converts outdated and unused computer hardware into useful, cost-effective, and sustainable IT solutions. The company was created to address two problems of concern in the digital age: the huge amount of electronic waste (e-waste) that is damaging the

environment and the huge amount of expense for setting up new computer devices at homes, schools or other small businesses. In order to provide intelligent solutions to different users, such as small businesses, schools, homes, cafes, and information centers, GreenTech Repurpose focuses on the recycling of current technology.

By harnessing the power of open-source technologies and propagating the responsible use of technology, the company is targeting to be a global leader in sustainable digital infrastructure. GreenTech targets lowering the cost and increasing the availability of sustainable IT solutions, particularly to underprivileged communities.

Green Tech Repurpose's main aim is to help make computers and technology available and accessible to everyone by offering affordable and cheap IT solutions from old computer parts. The solutions that Green Tech Repurpose made are suitable for different types of customers. For instance, the company provides learning computers for schools, internet routers, firewalls, storage systems, media servers, and private cloud setups. By implementing in this way, Green Tech Repurpose promotes sustainable development and gives access to users the ability to control over their own digital environment.

The company is based on 5 core values. The first one, **Sustainability**, by reducing e waste, it can protect the environment. Second one is **accessibility**, that means making sure everyone has the access for digital devices with a low budget. And the third one is **Innovation**, which means that solutions are based on creative and innovative ideas by using customizable free software tools. The fourth one which is **Security**, making sure users have the access to complete control over their data and privacy for their safety. And the last one is **Integrity** which is really essential for every type of business, ensures that being honest, clearing and delivering good quality services. These values shape the company's values and reputation, from product design to customer service and satisfaction which can lead to the reliability and trustworthiness of the brand.

3. Situation Analysis

GreenTech Repurpose is entering a market shaped by two major trends: the growing environmental concern over electronic waste (e-waste) and the increasing demand for affordable IT infrastructure, especially among underserved communities and small businesses. A thorough analysis of market trends and internal capabilities offers valuable insights into the company's strategic position.

3.1 Market Overview

In 2023, Malaysia created around 65,000 tonnes of electronic waste, but less than one fifth was recycled or recovered, according to Malay Mail (2025). The issue means there is a significant chance for businesses like GreenTech Repurpose to help reduce e-waste by making sure IT equipment is used for an extended period.

At present, the Malaysian ICT sector is developing very rapidly. Worth USD 23 billion in 2023, the industry is planned to grow at a rate of 15% each year to reach USD 65 billion by 2028 (Globe Newswire, 2024). Digital changes are the main factor driving growth in education, working from home, running small businesses and public services.

Maximize Market Research (2024) reports that the market for refurbished electronics internationally reached USD 272 billion in 2024 and is continuously expanding with an annual growth rate above 7.5%. More consumers are seeing refurbished electronics as better options for the environment and also for their budgets.

All these trends point to a strong setting for GreenTech Repurpose's mission and business.

3.2 SWOT Analysis

Strengths

- **Sustainability Focus:** The company's mission directly addresses growing global and local concern over e-waste.

- **Affordability:** By offering significantly cheaper alternatives to new hardware, GreenTech appeals to budget-conscious customers.
- **Custom Solutions:** A variety of service bundles allow clients to choose systems that fit their specific needs (e.g., schools, cafés, homes).

Weaknesses

- **Low Market Visibility:** As a startup, GreenTech is not yet a recognized brand, which may impact customer trust and initial sales.
- **Hardware Dependency:** The supply of used hardware depends on local availability, which may limit the company's ability to scale quickly.

Opportunities

- **Strategic Partnerships:** Collaborations with schools, NGOs, and CSR-driven companies can expand market reach and impact.
- **Government Alignment:** The company's goals align well with national policies on sustainability and digital inclusion, opening doors for support or subsidies.
- **Educational Sector:** There is growing demand for low-cost educational workstations, especially in rural or low-income areas.

Threats

- **Competitive Market:** Low-cost new hardware from large tech companies remains a strong competitor.

- **Rapid Tech Changes:** Advances in software and hardware could outpace the capabilities of repurposed systems.
- **Regulatory Risk:** Any tightening of laws regarding refurbished electronics or e-waste management could increase operational hurdles.

4. Marketing Objectives

GreenTech Repurpose aims to establish itself as a respected and innovative business in Malaysia's used IT industry. By examining the company's goals, we can see that economic well-being, social care, and eco-friendly technology converge as digital possibilities and societal attention to the environment intensify. These goals are intended to align with the global rise of circular economy thinking, Malaysia's more proactive approach to e-waste, and the need for reasonably affordable technology for all. The scenario analysis has shown that these objectives are based on ongoing changes in the economy, nature, and digital services.

4.1 Increase Brand Awareness

To achieve a 30% increase in brand visibility among schools, small and medium-sized enterprises, and NGOs within the first year, GreenTech Repurpose will employ a combination of communication strategies focusing on sustainability. Targeted marketing through public relations, content, effective online advertising, and environmental communication will enable the company to reach and retain its key customers. The company will rely on platforms, including social media, learning communities, and industry events, to demonstrate that it is a solution-minded and conscious provider of IT services (Mensah et al., 2022).

4.2 Expand Customer Base

The company's acquisition efforts primarily focus on at least 200 new institutional clients in areas that lack adequate banking services. Examples of such schools include those with limited budgets, community learning centers, and community groups that lack sufficient IT resources. Because GreenTech provides affordable, custom, and ready systems, it will address a significant

problem in education and community development, according to Y. Wang (2019). In this situation, GreenTech's promise is based on low prices, sustainability, and being available to.

4.3 Develop Strategic Partnerships

To grow and expand its capabilities, GreenTech will establish formal partnerships with at least five NGOs, schools, or companies actively engaged in Corporate Social Responsibility (CSR). Besides helping to reach more customers, forming partnerships will also make the companies more credible and eligible for additional funding. Suggests that CSR has the most significant effect when it is built into collaborative partnerships and partners work toward the same aims. Working with partners that share similar goals, GreenTech can achieve more and reduce expenses on marketing and distribution (Carroll & Shabana, 2010).

4.4 Boost Online Engagement

Afrikabank aims to boost digital engagement by 50% by making sure clients regularly update their profiles on social networks, read the firm's blog, receive videos, and view customer feedback. Working digitally helps green technology brands gain awareness and start making conversions thanks to trust and their reputation. When GreenTech shares learning materials, success stories from customers, and industry information, it helps construct an online community focused on both the environment and technology (Digital Marketing, 2019).

4.5 Support Circular Economy Awareness

The organization aims to inform more than 10,000 Malaysians about the importance of reducing e-waste, sustainably utilizing technology, and adopting a circular economy approach. Community involvement is essential and can be facilitated by organizing workshops, webinars, campaigns, and collaborating with environmental organizations in these countries (Zainal & Abas, 2018).

4.6 Revenue Target

As a final goal, the company aims to generate MYR 1.5 million by selling its repurposed IT equipment within its first year. This has become a target because people require less expensive

technology and are buying more refurbished devices. The diffusion of innovations primarily relies on how relative and compatible GreenTech’s products are, a feature that early adopters in the education and nonprofit sectors notice right away (Diffusion of Innovations, 5th Edition by Everett M. Rogers, 5th Edition).

Thanks to these goals, GreenTech Repurpose stands out as a brand that prioritizes both impact and profit. The company enhances its standing in Malaysia’s circular economy by focusing on less developed areas and forming new partnerships. Due to these goals, both digital inclusion and sustainable progress are encouraged.

5. Marketing Strategy

GreenTech Repurpose isn’t just jumping on the eco-friendly bandwagon for kicks. We’re talking real momentum here. People actually care about the planet now (I know, wild, right?), and everyone’s hunting for smarter, cheaper tech. Plus, Malaysia’s all about going digital and doing it sustainably—so, perfect timing.

We’re not just throwing spaghetti at the wall. The plan? Get real about who we’re selling to, how we’re talking about ourselves, and where we pop up—online or in person. Prices? Gotta be sharp. Distribution? Slick and simple. And, yeah, the digital game has to be strong, ‘cause if you’re not online, do you even exist? Bottom line: grow the brand, do some good, and actually make an impact instead of just talking about it.

5.1 Target Market Segmentation

GreenTech’s diverse solutions cater to a broad range of segments:

Segment	Description	Key Needs	Product Bundle
---------	-------------	-----------	----------------

Educational Institutions	Public and rural schools, training centers	Affordable, secure, and robust IT systems	School Box
Home Users	Budget-conscious households	Basic computing, privacy, child-safe browsing	Home Guard Pro
Gaming Cafés & Retailers	Small businesses with high foot traffic	Reliable hardware at low cost	Smart Shop Starter
NGOs & Community Centers	Nonprofits and grassroots tech hubs	Reliable digital access and education tools	Custom Setup
Freelancers & Remote Workers	Independent professionals	Secure servers, data control, productivity	Media & Cloud Workstations

Alright, here's the real talk version:

5.2 Product Positioning

GreenTech Repurpose isn't just another IT shop in Malaysia. Nah, we're the go-to crew if you want tech that's easy on your wallet and the planet. We're talking solid gear made from top-notch refurbished hardware, running on open-source magic, all wrapped up in a feel-good mission to actually help people. Not just a business—more like a movement.

What's our vibe? Here's how we roll:

- Saving the planet (or at least doing our part to keep e-waste outta landfills)
- Making tech affordable for folks who usually get priced out
- Stuff that actually works—no weird crashes or headaches. Open-source, but sturdy.
- Your data? Your business. We don't snoop.
- All about the people—teaching, including, making sure nobody's left behind

Basically? If you want guilt-free tech that won't break the bank or the earth, we're your people.

5.3 Promotion Strategy

How we're actually gonna get the word out (because let's face it, if nobody knows you exist, you might as well be selling routers on Mars):

A. Digital Marketing

So, we're hitting up Facebook, Insta, TikTok, LinkedIn—the whole squad. Not just boring ads, either. We're talking tutorials like “How to turn that dusty router into something cool,” real stories from folks who've actually done it, and dropping some environmental truth bombs that'll make you think twice before tossing your old tech. Paid ads? Oh yeah, we're targeting teachers, small business peeps, and anyone who gets fired up about saving the planet.

B. Community Outreach

We're not just hiding behind screens. Actual real-life workshops in schools, especially out where resources are slim. Plus, teaming up with NGOs for awareness events and some good old-fashioned IT training. If we're gonna make a dent, gotta get hands-on.

C. Public Relations & Press

Getting our name out there—think local blogs, news, anywhere folks who care about tech and the environment hang out online. Plus, showing up at expos and events (yeah, those MDEC things where everyone pretends to know what's going on) to network and make some noise.

D. Referral & Loyalty Programs

Here's the fun bit: "Green Ambassador" program. Bring a friend, get perks. Keep coming back? More discounts and service credits. It's basically like a coffee shop punch card, but way better for the planet.

Bottom line: we're everywhere, talking to everyone, and making it worth your while to join in. If that doesn't move the needle, what will?

5.4 Pricing Strategy

GreenTech will adopt a **value-based pricing model**, ensuring affordability while communicating quality and purpose. Example pricing structure:

Product	Starting Price (MYR)	Notes
School Box	850	Bundled with learning software

Smart Shop Starter	999	Optimized for point-of-sale
Home Guard Pro	700	Includes firewall and parental control features
Custom Cloud Workstations	1,200+	Configurable to client needs

Discounts may be provided to NGOs, rural schools, or partners through CSR partnerships and government support schemes.

5.5 Distribution Strategy

Here's the game plan for getting GreenTech's stuff out there:

First up, straight to the people—folks can order right off our website or even slide into our DMs on social. Super easy.

Then, we're teaming up with NGOs and local learning centers. These partnerships? Gold. They help us reach communities we'd never touch otherwise.

Retail's not dead—so yeah, we'll have pop-up booths at expos, eco-fairs, whatever's buzzing. Nothing beats that face-to-face hype.

Plus, we've got a B2B squad hustling to land deals with schools, small businesses, and whoever else needs our gear.

Oh, and before anything leaves our hands, we make sure every system's good to go—set up, tested, and packed with a manual simple enough for your grandma (no offense to grandmas). Less headache for everyone.

5.6 Digital Engagement Strategy

Alright, let's be real—if you're not online, do you even exist? Trust, reach, growth... they all start with your digital game.

Website: Get a slick, mobile-friendly site up ASAP. We're talking e-commerce, a blog people actually want to read, and real-world case studies (not just corporate fluff).

Content Plan:

- Sling out weekly blog posts. Stuff like sustainability hacks, killer DIYs, and what's new in the shop. Keep it fresh, keep it weird, keep it useful.
- Drop a monthly newsletter. Tell folks about wins, insider stories, and yeah—throw in some juicy deals.

Analytics: Don't just guess if it's working. Actually track stuff with Google Analytics, Facebook Insights, whatever gets you the data. Double down on what hits, scrap what flops.

Customer Support: Bots are cool—when they work. Get a chatbot and a ticket system running so people aren't left hanging. Fast replies = happy customers. No brainer.

5.7 Strategic Partnerships

let's talk about spreading the word (and the impact). First up, hit up those big company CSR folks—think sponsorships, maybe scoring a truckload of used laptops instead of just a “thoughts and prayers” email. Don't sleep on the education ministries either; sneak in with a few pilot projects at underfunded schools and actually show what's possible. Oh, and local governments? Get them on board for some e-waste campaigns. People toss electronics like candy wrappers—someone's gotta tell them that's not cool.

6. Implementation Plan

GreenTech Repurpose takes 12 months to implement its marketing strategy in a planned, phased and organized way. This plan supports what the company aims to do, how it will use its budget and its commitment to sustainable progress. Each part of the plan details tasks to be done, who is responsible, how progress will be measured and the main goals.

Phase 1: Infrastructure and Branding Setup (Months 1–2)

Objective: Develop a strong brand online, prepare your operations and ensure the brand is consistent across elements.

Key Activities	Responsible	Deliverables
Website launch with e-commerce, blog, and customer support features	Web Development & Marketing Teams	Fully functional, mobile-optimized website
Creation of social media accounts and content calendars	Marketing Team	Accounts on Facebook, Instagram, LinkedIn, TikTok
Design of brand assets (logos, banners, templates, pitch decks)	Design Team	GreenTech's official brand kit
Finalization of pricing, service bundles, and documentation	Product Team	Published package offerings: School Box, Home Guard Pro, Smart Shop Starter
Implementation of customer support tools (live chat, ticketing system)	IT & Support Team	Operational client support channels

Milestone: GreenTech's digital infrastructure fully operational by end of Month 2.

Phase 2: Brand Awareness and Engagement (Months 3–5)

Objective: Drive initial brand visibility and community awareness through targeted campaigns.

Key Activities	Responsible	Deliverables
Launch of paid social media campaigns	Digital Marketing Team	Targeted ads to reach educators, NGOs, and rural tech users
Publication of blogs, customer stories, and educational videos	Content & Creative Teams	Weekly content across platforms
Initiation of school and NGO outreach workshops	Outreach & CSR Teams	3–5 community-based events
Introduction of “Green Ambassador” referral program	Marketing & Partnerships Team	Incentive-based referral system

Milestone: Achieve 5,000+ monthly digital impressions and conduct at least 3 public workshops by end of Phase 2.

Phase 3: Partnership Development and Market Penetration (Months 6–8)

Objective: Build strategic alliances and expand market reach to underserved areas.

Key Activities	Responsible	Deliverables
Formalize partnerships with NGOs, CSR departments, and educational institutions	Partnership Development Team	Minimum of 5 signed MoUs or partnership agreements

Deploy pilot systems in schools and community tech hubs	Technical & Deployment Team	10 pilot systems delivered
Participation in expos, tech fairs, and sustainability events	Marketing & Events Team	Representation in 2–3 major events
Specialized marketing in rural districts	Regional Marketing Units	Customized outreach in low-connectivity zones

Milestone: Secure 100 institutional clients and 3 formal partnerships by end of Phase 3.

Phase 4: Performance Optimization and Impact Evaluation (Months 9–12)

Objective: Evaluate campaign success, optimize strategies, and report social/environmental impact.

Key Activities	Responsible	Deliverables
Monitor marketing KPIs using analytics tools	Analytics & Insights Team	Monthly reports on engagement, reach, and ROI
Customer satisfaction surveys and feedback integration	Support & Product Teams	Feedback analysis reports
Launch of a second wave of refined ad campaigns	Marketing Team	Optimized, data-driven promotional content
Publication of annual impact report (e-waste saved, reach, social impact)	Sustainability & PR Teams	Public report for stakeholders, partners, and funders

Milestone: Achieve 200+ institutional clients, 50% growth in digital engagement, and publish first environmental impact report.

Summary of Key Performance Indicators (KPIs)

KPI	Target
Brand awareness increase	30% within Year 1
New institutional clients	200 acquired
Online engagement growth	50% increase
Strategic partnerships	Minimum of 5
Circular economy awareness	Reach 10,000 Malaysians
Revenue Target	MYR 1.5 million

7. Budget Allocation

GreenTech Repurpose wants their marketing to actually work, they can't just wing it. Gotta have a budget that makes sense, otherwise, it's just money down the drain. So, they're tossing RM 50,000 into the mix, and honestly, every ringgit counts here. They're splitting it up five ways: digital marketing (because duh, everyone's online), content creation (gotta have something worth sharing), PR (let the world know they exist), community stuff (people love feeling involved), and, of course, a little emergency stash for when things go sideways. That's how you stretch a buck without looking cheap.

7.1 Digital Marketing(32% – RM 16,000)

Category	Description	Amount (RM)	% of Total
Social Media Ads (FB, IG, LinkedIn)	Paid campaigns to promote awareness and drive traffic	10,000	20%
SEO & SEM	Optimizing website + Google Ads	4,000	8%
Website Maintenance & Hosting	Keeping the website updated and secure	2,000	4%
Subtotal (Digital)		16,000	32%

7.2 Content Development (16% – RM 8,000)

GreenTech Repurpose is all about, boring facts aren't gonna cut it. You need a killer story—something that actually sticks.

- **Video Production (RM 5,000):** We're talking slick promo vids and bite-sized explainers for YouTube, Insta, TikTok, whatever's hot. No shaky phone footage, please.
- **Blog and Article Writing (RM 2,000):** SEO isn't magic, but cranking out solid blog posts on the regular? That's how you climb those Google rankings and make people see you know your stuff.
- **Graphic Design (RM 1,000):** Memorable visuals, eye-catching infographics, digital flyers that don't look like a bored intern made them in PowerPoint—this is where brand vibes come to life.

7.3 Public Relations & Partnerships (18% – RM 9,000)

Media, organizations, whoever's listening—we're jumping in to boost our street cred and maybe make a few friends along the way.

- **Press Releases (RM 2,000):** Time to hit "send." We're blasting our news to every local and industry rag that'll have us.
- **NGO and Institutional Partnerships (RM 2,000):** Basically, we're sliding into the DMs of every group that shares our vibe. If they're down for a collab, even better.
- **Event Participation (RM 5,000):** We're not just lurking online. Expect to see us out in the wild—sustainability fairs, tech expos, campus events. If there's a chance to shout about what we're doing, we're there.

7.4 Community Engagement (18% – RM 9,000)

Nothing beats actually showing up and getting your hands dirty in the community. You can't just throw tech at people and expect magic, right? Here's how that cash breaks down:

- **Workshops & Awareness Campaigns (RM 6,000):** Basically, this goes into running chill sessions where folks can actually learn something useful—think tech bootcamps, but less nerdy and more real-talk. It’s about making tech less scary and more “hey, I can do this.”
- **Product Demos (RM 3,000):** Honestly, people wanna see stuff in action. So we’re rolling out demos of all this refurbished tech—no smoke and mirrors, just straight-up “here’s how this gadget can actually make your life easier.”

7.5 Miscellaneous & Monitoring (6% – RM 3,000)

This is the “just in case” stash and the nerdy side of marketing, all rolled into one.

Contingency Fund (RM 2,000): Basically, this is the emergency pizza money—except, you know, for last-minute ad spikes or random expenses nobody saw coming. Prices jump, platforms change, or someone forgets to read the fine print? No sweat, you’ve got a buffer.

Analytics & Marketing Tools (RM 1,000): Gotta keep tabs on what’s working and what’s flopping, right? So, this chunk goes to stuff like Hootsuite, Google Analytics, or whatever CRM flavor you’re into. If you’re not tracking, you’re guessing—nobody’s got time for that.

Budget Allocation Summary

Category	Amount (RM)	Percentage
Digital Marketing	16,000	32%
Content Development	8,000	16%
Public Relations & Outreach	9,000	18%

Community Engagement	9,000	18%
Miscellaneous & Monitoring	3,000	6%
Total	50,000	100%

8. Evaluation

In conclusion, GreenTech Repurpose demonstrates that it is possible to combine technology and sustainable environmental development. It helps dealing with the increase of e-waste in our world while reusing them smartly and efficiently. With the main goal of low-cost repurposing, it allows people who have financial issues to have access to the technology also. With its emphasis on affordability, flexibility, and environmental consciousness, our GreenTech can carve out a niche market that is not currently explored in depth. Plus with the awareness of global warming and e-waste, GreenTech is a new innovative business in the market. But in order to maintain momentum, GreenTech needs to keep improving its marketing strategies by adjusting to its customers. Compared with other companies who focus on producing from scratch in large batches, GreenTech can face some issues in production rate. However, it can be dealt with appropriate management strategies. In general, this plan places GreenTech Repurpose as a force for even greater systemic change in the utilization, recycling, and valuation of technology and as a source of sustainable technology. GreenTech is positioned very strongly to achieve phenomenal growth in the sustainable technology market with its stable foundation and purpose-driven strategy. With a good marketing and management plan, GreenTech can become one of the tech-giants in the hardware industry,
