1. Project Background

1.1 Project Name

TAARA. The name is primarily an acronym formed from the first initial of each founding group member: **T**iffany, **A**rif, **A**madou, **R**afi, and **A**rkar. This represents the collaborative effort and shared vision at the core of the project.

Beyond this personal connection, the name "Taara" also holds a symbolic meaning. In several languages, including Hindi and Sanskrit, "Taara" (तारा) translates to "star." This dual meaning perfectly encapsulates the project's mission. We aim to provide a "five-star" cleaning service that makes student rooms sparkle, creating a pristine and motivating environment. Simultaneously, the project provides a platform for our student workers to shine like stars, empowering them to achieve financial independence and develop valuable skills. The name, therefore, reflects both the personal commitment of the team and the aspirational goals of the service.

1.2 Project Descriptions

TAARA is a student-led social business initiative established within Albukhary International University (AIU). The project operates as an on-campus cleaning service, creating a platform for students to work as service providers for their peers. By offering these services, student employees can earn a supplementary income, fostering financial independence, a sense of responsibility, and valuable work experience. As Austin, Stevenson, and Wei-Skillern (2006) explain, social entrepreneurship often combines commercial and social logics to address societal problems. TAARA's dual-impact model fits this description perfectly, as it provides a practical cleaning service while simultaneously empowering students through meaningful employment.

1.3 Targeted issue and problems

Firstly, there is a significant struggle with the maintenance of clean and hygienic personal living spaces. This is not a problem unique to AIU; research consistently shows that students' living environments are crucial for their mental health and academic success. A cluttered and unhygienic environment can become a major source of stress and distraction, directly hindering a student's ability to focus and perform academically (Lepp et al., 2015). The demanding nature of coursework, combined with extracurricular activities, leaves many students with limited time and energy for domestic chores, leading to conditions that can negatively impact both physical and psychological well-being.

Secondly, a major socio-economic challenge is the limited availability of meaningful and flexible employment opportunities for students. Many students require supplementary income to support their studies and reduce financial dependency, yet the structure of conventional part-time jobs often clashes with academic timetables. This conflict can force students to choose between their studies and financial stability. According to Barron and Anastasi (2008), when on-campus employment is structured to be flexible and complementary to student life, it can be a highly positive factor, providing not only income but also valuable professional skills. The lack of such opportunities at AIU represents a significant barrier to student empowerment and financial independence.

1.4 Objective

TAARA's main goal is to help students overcome three key challenges, as they are time-strapped for the maintenance of their living quarters. Other issues include the limited flexible job opportunities in university areas and environmentally damaging materials in cleaning. TAARA, with its cleaning service managed by students for students, wishes to ensure clean living spaces alongside flexible, empowering employment and environmentally sustainable practices. The project seeks to encourage financial independence, skill-building, community spirit among students, and reducing the adverse environmental footprint from cleaning activities on campus.

1.5 Outcomes

Some of the expected outcomes would be cleaner and hygienic conditions in the student hostels, with a consequent drop in complaints or even positive feedback. Student workers would receive additional income, improved professional skills, and increased independence from a financial standpoint, this would be followed through job records and surveys. Eco-friendly cleaning agents would expose fewer harmful chemicals to users and the environment, this may have to be gauged through waste audits and sustainability surveys. At last, peer-to-peer support and the direction of community engagement will undergo strengthening and thus will be assessed using pre- and post-intervention surveys of social cohesion and attitudes toward cleaning work.

2. Social Issues

In the dynamic environment of a university campus, students are often required to balance academic coursework, group projects, extracurricular activities, and personal commitments. At Albukhary International University (AIU), this demanding lifestyle has led to a number of significant social issues that directly affect student well-being, productivity, and financial stability. The TAARA project was designed in direct response to these challenges.

2.1 Poor Maintenance of Personal Living Spaces Due to Time Constraints

Among the most frequent and still neglected issues among university students, keeping their living space clean and organized is not an easy task. The rooms in on-campus hostels accommodate many students and the students should ensure that the rooms are clean. Nevertheless, schoolwork, extended study sessions, and extracurricular activities tend to exhaust students and deprive them of the ability to undertake some cleaning (cleaning either daily or weekly). This results in dust, clutter and unhygienic conditions, which with time can have adverse effects both on the health of the body and on the mind.

Air in such a chaotic and dirty environment may be not only distracting but may also lead to strenuousness and even diseases like allergies or infections. The fact that the university does not have any optimal measures to help the students cope with their life circumstances left a gaping issue unaddressed that naturally did not seem to affect the academic infrastructure to the greatest degree.

2.2 Limited Access to Flexible and Meaningful Employment Opportunities

Lack of flexible work opportunities in the part-time sector that do not conflict with academic time tables is another acute problem of the university students. Although it is common to find that a majority of the students are keen on working to pay their personal or education fees, most of the external working positions provided require fixed hours of work or are situated far away in campus. The problem with such jobs is that they tend to clash with classes and other assignments which as a student you are supposed to take seriously and due to this many students just cannot do this job.

This leaves the students financially dependent on the family or external assistance and the student does not have an opportunity to learn how to be responsible professionally, how to manage his/her money, and not to have his/her first job experience that can help enormously after his/her graduation. Among those students, who want to gain empowerment through education, this socioeconomic disparity may be strongly manifested in students with disadvantaged or rural backgrounds that fail to overcome the financial obstacles on the academic pathway.

2.3 Environmental Concerns Related to Conventional Cleaning Products

Beside the personal and economic problem, there is also an environmental one, which is connected with the use of the conventional chemical cleaning products. In spite of their efficiency, these products are also effective in the short term and they usually contain substances which are harmful both to the environment and human beings. At a time when sustainability becomes a priority throughout the world, AIU, which is a value-driven institution, lacks sustainability in applying environmental awareness principles in daily campus operations, understanding hygiene and sanitation in particular.

3. Solutions

In order to curb the major social issues that have been established in the population of Albukhary International University (AIU) student body, TAARA enacts an imminently multifaceted solution. The given solutions are not intended to solve the current issues of filth, unemployment, and environmental degradation only but also to shape the culture of responsibility, empowerment, and sustainability in students. What makes this model unique is that the service platform is run *by* students, *for* students. This peer-to-peer dynamic reframes the entire initiative as an act of community care. It transforms the nature of the work into a compassion-driven activity that builds social cohesion, empathy, and mutual respect among peers, a core characteristic of impactful social ventures (Miller, Grimes, McMullen, & Vogus, 2012). Therefore, TAARA's solutions are not just a

series of services, but an interconnected system designed to foster a healthier, more empowered, and more supportive student community.

3.1 Cleaning Services on Campus to Students

TAARA offers a cheap on-demand cleaning service, to be delivered only to students residing in on-campus hostels. It is a consumer revolution of service; all of it is run and served by the students themselves, which makes it extremely relatable, convenient, and trustful. The booking of a session is made through an easy digital or physical requesting system. Student workers trained on cleaning activities like sweeping, mopping, dusting and organizing are the ones who do the cleaning. Such a solution is effective to assist students:

1. Have a proper and clean living environment.
2. Ease the compulsions of cluttering and unpleasant filth.
3. Study better and overall performance increases in a cleaner and more motivating atmosphere.

3.2 Job Opportunities which are flexible and empowering

TAARA is a micro-job marketplace in the campus environment. It provides students with a meaningful job which well suits their class hours as well as commitments. TAARA's model of offering flexible, on-campus employment allows students to earn supplemental income and gain valuable professional skills without academic compromise. This approach has been shown to be beneficial to the overall college experience, providing students with both financial support and practical skills (Barron & Anastasi, 2008). Important advantages are:

1. Additional earnings to decrease dependence on financial resources.
2. Developing professional skills (such as time management, communication, teamwork).
3. Education of students who demand on-campus opportunities to fund their education, particularly, low-income.
4. TAARA promotes a feeling of ownership, responsibility, and pride among all student employees, and cleaning is not viewed as an entry-level position, but a meaningful position.

3.3 Eco Friendly Cleaning Supplies Use

One of the ways that TAARA inculcates environmental sustainability in its operations is to substitute the regular cleaning chemicals with non-toxic,

eco-friendly cleaning materials. These would be cleaning products made of plants, biodegradable/eco-soaps and recyclable materials (such as a cloth which can be washed rather than a paper towel). By using non-toxic, eco-friendly cleaning materials, TAARA minimizes its environmental footprint. This strategy of adopting measurable green practices is a key component of modern sustainability efforts and can build institutional credibility (Alonso-Almeida & Segarra-Oña, 2017). This undertaking provides health protection of the students with reducing their exposure to toxic chemicals. The minimization of the environmental imprint, in accordance with the ideals of global sustainability. An example of a green innovation, in which it demonstrates how small-scale efforts can be harnessed towards the greater climate and environmental goals. TAARA takes this chance to also educate workers and clients on sustainable laws of cleaning, therefore promoting the culture of environmental awareness throughout the university.

3.4 Community building and Peer-to-Peer Support

The culture of cooperation and support is promoted in the TAARA model. Working with students, the project will spread good relations on campus, empower empathy and collaboration. The proposed all-in-one digital platform is central to the project's potential for social innovation. Digital platforms are critical in the modern sharing economy for managing peer-to-peer services effectively, as they provide the necessary infrastructure for booking, payments, and governance (Hamari, Sjöklint, & Ukkonen, 2016). It is also a peer-to-peer dynamic that can partially eliminate stigmatization of the concept of cleaning as a low-status occupation and position it as a service and a show of care to the community.

3.5 Job and Digital Booking Management Platform

To facilitate it, TAARA is coming up with a basic digital interface (website or app) through which students can:

1. In their convenience book cleaning services.
2. Look at service availability and prices.
3. Request to work shifts and deal with schedules.
4. Measure profits and get feedback.

3.6 Project Execution Process

1) Recruitment & Training

Recruit student workers through campus announcements and applications. Training includes cleaning methods, green practices, and customer relations.

2) Service Rollout

Launch on-demand cleaning services for student hostels. Customized scheduling for academic trainers.

3) Digital Platform Implementation

Develop and deploy the website/app for:

Booking cleaning service.

Applying for jobs and tracking work schedules.

Tracking payments and receiving service ratings.

4) Monitoring & Evaluation

Regular hostel cleanliness inspections.

Gather feedback from students and workers through surveys.

Evaluate environmental impact through waste audits and usage reports.

5) Continuous Improvement

Modification of operation based on reviews and performance data.

Expand additional services or features needed on the digital platform.

4. Social Impact

The general goal of TAARA's project is to establish a cleaner, healthier, and greener living environment at Albukhary International University (AIU) while enabling students to find flexible-off times jobs-that-demand-projects and cultivate a sense of responsibility, collaboration, and environmental consciousness. In the key social issues of filth, unemployment, and environmental devastation, TAARA joins forces with others to initiate viable student-led solutions for the advancement of both individual and community growth.

4.1 Expected Outcomes for Each Solution

- **Cleaning Services on Campus to Students**

This solution is expected to translate into significantly cleaner and well-maintained on-campus hostels. A clean environment reduces stress, minimizes health hazards caused by unhygienic working conditions, and increases the student's ability to focus on academics. Students in this sense further realize the importance of maintaining cleanliness in people-sharing spaces, which is a reinforcement for suitable behavior.

- **Job Opportunities which are Flexible and Empowering**

This initiative will relieve students of financial stress by providing them with much-needed income. Work schedules will be flexible, for students to fit work around their study hours. The students will develop vital professional skills such as time management, communication, leadership, and teamwork, which will continue to benefit them after college. Crucially, the idea of cleaning work will be reinvigorated: Students will perceive such work as an honor bestowed on them to serve their respective communities in lieu of a low-status job.

- **Eco-Friendly Cleaning Supplies Use**

In consideration of environmentally conscious practices, non-toxic, biodegradable, and recyclable substances shall be used to eliminate or reduce student exposure to deleterious chemicals and least environmental footprint for campus cleaning activities. In this way, the students gain consciousness regarding eco-friendly practices and will most presumably adopt such sustainable habits in their own lives, thus contributing toward the larger environmental goals of AIU.

- **Community Building and Peer-to-Peer Support**

TAARA will, therefore, build in a culture of shared responsibility, understanding, and community spirit for the students acting both as their own service providers and beneficiaries. In effect, it will serve to enhance social ties on campus while reducing the stigma attached to inherent types of work. Cleaning and service work should, therefore, be seen by students as acts of care for the community, which could inculcate a lasting positive impression toward volunteering and civic engagement.

- **Job and Digital Booking Management Platform**

The platform will ensure efficient coordination for cleaning and work schedules. The online booking tool will let students book services, record hours, view compensation, and give and receive feedback, ensuring operational transparency and efficiency. Furthermore, it will also foster digital literacy among the students.

4.2 Methods of Assessment

TAARA's multifaceted approach to assessment aligns with established frameworks for measuring social impact, which call for a combination of quantitative and qualitative indicators. The plan to track job creation and income levels through employment records provides a clear metric for economic

empowerment (Barron & Anastasi, 2008). Similarly, conducting waste audits and tracking the reduction in chemical purchases offers a tangible measure of the project's environmental footprint (Alonso-Almeida & Segarra-Oña, 2017). To measure the more intangible goal of community building, the use of pre- and post-intervention surveys to gauge social cohesion and attitudes towards cleaning work is a sound methodological choice. This mixed-methods approach ensures a holistic evaluation, capturing not only the direct outputs of the service but also its deeper social and environmental value. Each solution will be measured through clear indicators:

- **Cleaning Services**

Cleanliness will be monitored through frequent inspections by the hostel management and student satisfaction survey audits. The decline in complaints about cleanliness and the positive feedback received will, therefore, be taken as indicators of success.

- **Job Opportunities**

Indicators of success will be tracked through job records of attendance, student income reports and skill development assessments either via periodic surveys done on their behalf or by themselves. Retention rates of student workers and trend analysis of their academic performance will be used as additional indicators.

- **Eco-Friendly Supplies**

Environmental impact shall be assessed as volumes and types of cleaning materials used, reductions in chemical purchases, and waste audits. Additionally, changes in students' attitudes towards sustainability will be evaluated through surveys.

- **Community Building**

Social cohesion will be evaluated by surveys conducted before and after the intervention measuring students' perceptions of cleaning work, sense of community, and relationships with peers. Participation in team-building activities will be recorded.

- **Digital Platform**

Platform success criteria shall include analytics usage, number of bookings, frequency of use, user ratings, and system uptime. Feedback forms will be used to collect qualitative data concerning users' experiences and suggestions from an improvement standpoint.

4.3 Impact on Community

AIU student community positive effects by TAARA It alleviates some of the burden from students to clean their living areas, offers affordable cleaning services which results in healthier environments for studying. The project held 10,900 in "flexible" job opportunities to equip students economically powered and income-giving educate (ES) particularly ES of disadvantage. The utilization of green products is one way in which students can learn environmentally friendly practices, and the intention to create sustainability culture based upon global goals for sustainable development. In addition, the peer-peer service model promotes respect from others and a sense of community that makes sanitation work seem less stigmatizing than just another job to be done in sterility. Taken together, while scarce students help themselves financially and gain awareness of their environmental responsibility, it definitely helps the security and sustainability of our campus ecosystem.

5. Potential Social Innovation

TAARA has the potential to fuel social innovation in the software applications, tools, processes, business models, and equipment that can bring about long-term socio-environmental impacts outside Albukhary International University (AIU). The initiative is not only tackling contemporary issues but paving the way for scalable and sustainable solutions that could then be adapted by other colleges, communities, and municipalities.

5.1 Software: TAARA All-in-One Community Service App

The potential for TAARA to innovate lies in its development of a robust, all-in-one digital platform. This app would be more than a simple booking tool; it would be the central nervous system for a campus-based peer-to-peer economy. The success of such economies often depends on a strong digital platform to handle governance, build trust, and ensure operational efficiency (Zhu & Liu, 2020). By seamlessly integrating job management, service booking, and payment tracking, the app directly addresses these critical needs.

Furthermore, the platform can tap into the core motivations that drive participation in collaborative consumption. Research shows that users are drawn to the sharing economy not just for economic benefits, but also for reasons of

sustainability and community building (Hamari, Sjöklint, & Ukkonen, 2016). Features like an "eco-impact tracker" would directly appeal to this desire for sustainability, which is a growing concern among university students (Emanuel & Adams, 2011). By making the positive environmental impact visible, the app gamifies participation and reinforces the project's social mission, transforming a simple cleaning service into a powerful tool for community engagement and sustainable action. Imagine an app that includes:

- A job marketplace that connects students with a variety of micro-tasks, like cleaning, tutoring, and event support.
- A real-time service booking system complete with availability calendars.
- A digital wallet to help users manage their payments and earnings.
- An eco-impact tracker that shows how many liters of toxic chemicals have been avoided and how much waste has been reduced.
- A fun, gamified reward system featuring badges and leaderboards to encourage participation in cleaning and sustainability efforts.

Plus, the app could be designed with modular features, making it easy to add new services in the future, such as recycling management or peer mentoring.

5.2 Tools: Eco-Cleaning Starter Kit

The proposal to evolve TAARA into a social enterprise franchise is a strategic vision for scaling its impact beyond a single institution. Social franchising provides a robust framework for replicating a successful business model while ensuring the fidelity of its social mission (Bacq & Janssen, 2011). By creating centralized guidelines for service quality and sustainability standards, TAARA can ensure that each new branch maintains the core values that define the enterprise. This model allows for rapid expansion and local adaptation, empowering students on other campuses to launch their own branches, while a central body protects the brand's integrity. As Austin, Stevenson, and Wei-Skillern (2006) note, balancing social and commercial logics is key; the franchise model provides the structure to achieve this, making TAARA both self-sustaining and focused on its student-centric mission. Imagine a

game-changing equipment innovation: a standardized eco-cleaning toolkit designed specifically for student workers. This toolkit would feature:

- Reusable microfiber cloths
- Compostable gloves
- Refillable spray bottles filled with natural cleaners, like a refreshing vinegar-lemon blend
- QR-coded items to help track their use and encourage reuse
- Training materials embedded as QR videos on each item, showcasing best practices

This kit could serve as a branded, budget-friendly solution that other institutions might want to adopt, helping to foster a culture of sustainable cleaning everywhere.

5.3 Process Innovation: Peer-to-Peer Service Exchange Model

The process innovation at TAARA introduces a peer-to-peer service exchange model that transforms cleaning into a valued contribution on campus. Here's how it works:

- Students can both offer and receive services, fostering a sense of mutual respect among peers.
- Instead of traditional payments, service points could be used, which might be redeemable for meals, printing credits, or academic resources.
- The scheduling is driven by students and is decentralized, which not only lightens the administrative load but also empowers student leaders to take charge.

This approach could eventually lead to a campus service currency system, where various positive contributions like cleaning, mentoring, or organizing events earn credits that can be exchanged for various benefits.

5.4 New Business Model: Social Enterprise Franchise

TAARA has the potential to evolve into a student-run social enterprise franchise model, where:

- TAARA operates multiple branches, guided by its own
- Centralized guidelines that uphold quality and sustainability standards
- The majority of the revenue is funneled back into student welfare, cleanliness campaigns, and environmental initiatives

- Affordable startup costs make it easy for various institutions to get on board

This approach guarantees that the initiative stays focused on students while also being self-sustaining.

Figure 1.1. Social Business Model Diagram /Framework

6. Conclusion

In conclusion, the TAARA project represents far more than a campus cleaning service; it is a carefully designed social enterprise aimed at addressing critical, interconnected challenges facing the student community at Albukhary International University (AIU). By simultaneously tackling the issues of unhygienic living conditions, financial precarity, and environmental responsibility, TAARA exemplifies the kind of integrated problem-solving that defines successful social entrepreneurship (Austin, Stevenson, & Wei-Skillern, 2006).

The project's strength lies in its multifaceted, student-centric solutions. It provides flexible, on-campus employment that research has shown can be beneficial for student development and financial independence when structured correctly (Barron & Anastasi, 2008). It promotes environmental stewardship through its commitment to eco-friendly practices, meeting a documented desire among students for greater campus sustainability (Emanuel & Adams, 2011). Critically, its peer-to-peer model, facilitated by a modern digital platform, fosters a unique sense of community and shared responsibility (Hamari, Sjöklint, & Ukkonen, 2016).

Ultimately, TAARA aims to cultivate a lasting culture of empowerment, collaboration, and environmental consciousness. It serves as a practical, scalable model that could be replicated in other institutions, demonstrating that students themselves can be powerful agents of change. By creating a system where students support each other's well-being and success, the TAARA project is poised to make a significant and sustainable impact on the AIU community, allowing its students both as workers and as residents to truly shine.

Our Mission at Taara

TAARA is a student-run social enterprise at Albukhary International University (AIU). Our name means "star," reflecting our dual mission of providing a "five-star" cleaning service that makes student rooms sparkle, and being a platform for student workers to shine.

We address the daily challenges students face of balancing busy schedules with the need for a clean living space, and the struggle to find flexible employment. We offer practical solutions for clean living and empower students with meaningful work, fostering financial independence, responsibility, and community.

[Book a Cleaning or Apply for Job](#)

Our Vision for the Future

Taara is more than a cleaning service; it's a model for social innovation on campus and beyond.

Community Service App

An all-in-one digital platform for booking, job management, and tracking our eco-impact.

Eco-Cleaning Starter Kit

A standardized toolkit with reusable, eco-friendly supplies to promote sustainable cleaning habits.

Peer-to-Peer Exchange

A model where students can exchange services, fostering mutual respect and community support.

Social Enterprise Franchise

Expanding the Taara model to other institutions to scale our impact and student welfare initiatives.

Creating a Positive Social Impact

Our goal is a cleaner, healthier, and more empowered student community at AIU.

01

Healthier Living Spaces

Significantly cleaner hostels reduce student stress, minimize health hazards, and improve focus on academics, reinforcing the importance of clean shared spaces.

02

Financial & Professional Growth

Students gain financial relief and develop vital skills like time management, communication, and leadership, transforming cleaning into a respected community service.

03

Stronger Community & Eco-Consciousness

We foster a culture of shared responsibility and environmental awareness, enhancing social ties and promoting sustainable habits across the university.

9. Social CANVAS Model

Social Business Model Canvas

Key Resources Students (Workers): Students who provide cleaning services and manage the project. Eco-Friendly Cleaning Supplies: Non-toxic, biodegradable products. Technology Platform: A digital system (website/app) for booking services and managing job shifts. Financial Resources: Funding or investment to support initial setup and ongoing operations. <i>What resources do you need to run your activities? People, finance, access?</i>	Key Activities Providing Cleaning Services: Offering on-demand, student-run cleaning services for campus hostels. Recruiting and Training Students: Recruiting and training students to provide cleaning services and use Eco-friendly products. Managing Job Schedules and Payments: Operating the digital platform for booking, shift management, and payment tracking. Eco-Friendly Practices: Using environmentally sustainable cleaning products and practices. Community Building: Promoting peer-to-peer support and reducing stigma around cleaning work. <i>What programme and non-programme activities will your organisation be carrying out?</i>	Type of Intervention On-Demand Cleaning Services: Providing affordable, flexible cleaning services run by students for students. Job Creation and Empowerment: Offering students part-time, flexible jobs to earn income and gain skills. Eco-Friendly Practices: Using non-toxic, biodegradable cleaning products to promote sustainability. <i>What is the format of your intervention? Is it a workshop? A service? A product?</i>	Segments AIU Students: The primary target for both receiving cleaning services and working as service providers. Students in Campus Hostels: The key users of the cleaning services. Low-Income Students: Students who need additional income to support their studies. Customer Beneficiary Environmentally Conscious Students: Students who are interested in eco-friendly solutions. <i>Who are the people or organisations who will pay to address this issue?</i>	Value Proposition TAARA empowers students by providing flexible job opportunities, promoting sustainability through eco-friendly cleaning practices, and fostering a sense of community on campus. Social Value Proposition Impact Measures The impact can be measured through student feedback, surveys assessing improvements in campus cleanliness, reductions in complaints, the number of students employed, and the use of eco-friendly products, alongside the environmental footprint reduction. Customer Value Proposition Customers (students) gain a convenient, affordable, on-demand cleaning service tailored to their schedules, along with the opportunity to support sustainable practices while enjoying a cleaner living environment. <i>What do your customers want to get out of this initiative?</i>
Partners + Key Stakeholders AIU Administration: Supporting and enabling the project on campus. Eco-Friendly Cleaning Supply Providers: Suppliers of biodegradable and non-toxic cleaning products. Student Workers: The core of the service, providing the cleaning services and managing operations. Tech Development Team: Developing and maintaining the digital booking and job management platform. <i>Who are the partners and key stakeholders?</i>	Cost Structure Technology Development and Maintenance: Costs associated with developing and maintaining the digital platform (website/app). Training and Recruitment: Expenses for recruiting and training students to provide the cleaning services. Eco-Friendly Products: The cost of sourcing and maintaining a stock of environmentally friendly cleaning supplies. <i>What are the most important costs to your business?</i>	Channels Digital Platform (Website/App): The primary channel for students to book services, apply for work shifts, and track payments. Campus Announcements and Social Media: Used for recruiting student workers and promoting the service to students. In-person Requests: For students who prefer physical bookings, there could be a request form or help desk on campus. <i>How are you reaching your beneficiaries and customers?</i>	Revenue Service Fees: Revenue generated from students booking cleaning services. Subscription Fees: Potential for charging a small membership fee for students to access cleaning services at discounted rates. Digital Platform Monetization: Possible partnerships or advertisements within the app/website. <i>How do you generate revenue?</i>
