

COURSE : CCS3123-DIGITAL FORENCIS

LAB-01

GROUP-01

MD PARVEJ AHMED RAFI	AIU23102301
MAHER ALGALAB	AIU22102252
MUJEEB URAHMAN JUBNISH	AIU22102113

Table of Content

LAB 1: Introduction to Digital Forensics	2
Task 1: Remembering Secure Development Concepts	2
1. Definition of Digital Forensics	2
2. Three Types of Cybercrime and Examples	2
3. Reasons Why Organisations Need Digital Forensics Capability	3
4. Traditional Crime and Its Modern Cybercrime Equivalent	3
Task 2: Getting Started with a Forensic Tool – Autopsy	3

LAB 1: Introduction to Digital Forensics

Task 1: Remembering Secure Development Concepts

1. Definition of Digital Forensics

Digital forensics is a branch of forensic science focused on the recovery, preservation, analysis, and presentation of data found on digital devices, such as computers, smartphones, networks, and cloud systems.

It involves specialized tools and procedures to ensure that evidence is obtained in a legally admissible manner while maintaining integrity, accuracy, and reliability.

Digital forensics helps investigators:

- Understand the nature and timeline of security incidents
- Identify attackers or unauthorized users
- Recover lost or intentionally deleted data
- Reconstruct events leading up to an incident
- Provide expert testimony in court

2. Three Types of Cybercrime and Examples

Cybercrime Type	Simple Example
Hacking/Unauthorized Access	A person breaks into a company's computer system to steal confidential files.
Phishing	Attackers send fake emails pretending to be a bank to trick users into giving their passwords.
Malware Attacks	A virus infects a user's laptop and encrypts files demanding payment (ransomware).

3. Reasons Why Organisations Need Digital Forensics Capability

1. Incident Investigation & Response

Helps determine the cause, impact, and extent of a cyber-attack and supports recovery efforts.

2. Legal and Compliance Requirements

Many industries must retain evidence of security breaches for regulatory, auditing, or criminal proceedings.

4. Traditional Crime and Its Modern Cybercrime Equivalent

Traditional Crime	Cybercrime Equivalent
Theft of physical documents	Data theft, such as stealing files or confidential information from a computer system

Task 2: Getting Started with a Forensic Tool – Autopsy
